

Pavithra Subramaniam

Full Stack Development - TAMK, Tampere

To ,

The Recruiter

With a great motivation, I'm applying for Front end developer position in your reputed firm listed in LinkedIn.

I'm from India, did my bachelor's in Electrical major. I have worked as a selling partner support in Amazon, India, for about 6 years. I was working with various process improvements, solving unsolvable queries to provide the best customer (vendor) experience. I am trained in various division across the supply chain management support for Europe and North American divisions.

Though my job profile its not completely technical, I strived to get trained in various skillsets to be the top performer. I was waiting to switch my career towards technical background. My persistent search towards my new career, delivered me the perfect course to explore in Finland. I got an offer for Diploma course in Full stack development offered by Ministry of Education and Culture. Currently, I have completed my Front end development module of the course and started Backend development module.

I have been trained in C++, Python, Javascript, React, HTML & CSS and currently learning My-SQL. All my courseworks are in Github repositories. I have created a Dice game using python with UI, where user can customize the number of players and dices. I have also worked with data structures for my C++ and python courseworks. I have finished my react coursework with a Todo application, where user can log their tasks which can be viewed using various filters and different views/styles.

I tried to deliver whatever I was given in the courseworks. But I wanted to have explore more to be an full stack developer, mainly from industrial perspective which is different from academics. I'm proficient enough to be your Junior developer trainee. I am seeking a good internship more than a job where I can mould myself as a better programmer in all aspects. My working experience and ability to handle the pressure will help me to have an accelerated learning phase.

With my motivation and the exposure which I'm going to have this year, I will be one of the main developers in your team by the end of 2022. I'm very much interested in this position particularly due to the responsibilities of the role, giving me perfect challenges to enhance my career in Finland.

Miscellaneous

- Only fluent in English, about to start Finnish course with TE
- Loves Mathematics and mentoring the team
- Multitasking prioritization
- Loves process improvement and initiatives
- Feedback from the employer - 4/5 from yearly performance results
- Self Evaluation - Above average worker, 4.2/5.0

Though I don't have years of experience in programming, I have the strong fundamentals and passion to pursue my career towards programming. Hope you help me with that.

**Sincerely,
Pavithra**
